

BIDS

BRAIN IMAGING DATA STRUCTURE

Data standardization that simply works.

Simplified data organization and sharing for the
neurosciences

Standardized Organization

BIDS provides a consistent way to organize your neuroimaging data, making it easy to understand and share across research groups and institutions.

Community Driven

Developed by the neuroscience community for the community. BIDS continues to evolve based on real-world research needs and feedback.

Rich Ecosystem

A growing collection of BIDS Apps, validators, and analysis tools that work seamlessly with BIDS-formatted datasets.

Open Science

Promotes reproducible research and data sharing through standardized formats that are platform-independent and openly documented.

Validation Tools

Built-in validation ensures your datasets comply with BIDS standards, catching issues early and improving data quality.

Multi-Modal Support

Supports a wide range of neuroimaging modalities including fMRI, EEG, MEG, iEEG, PET, and behavioral data.
